

# L2 Management PoE Switch

WI-PMS310GF | WI-PMS312GF | WI-PMS318GF | WI-PMS320GF | WI-PMS326GF | WI-PMS328GF

## **Overview**

Wi-Tek L2 Management PoE Gigabit Ethernet Switch Provide flexible and high-cost performance full-gigabit access and uplink ports, support complete security protection mechanism, perfect ACL/QoS policies and flexible VLAN functions, easy to manage and maintain, and meet users' needs for network equipment that is easy to manage, high security, low cost Cost networking requirements, is the preferred networking equipment for small and medium-sized enterprises

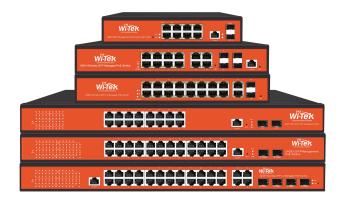

### **Features**

#### Flexible VLAN Division

In the enterprise office network, in order to isolate network access between different departments to avoid PCs infected by virus affecting the entire network, it is necessary to divide the interior into different VLANs to isolate the broadcast domain and improve the stability of the network. Wi-Tek Cloud Switch provides a convenient and flexible way to divide VLANs, allowing you to assign the ports to different VLANs as needed. Users in different VLANs do not affect each other, creating a more stable network for the users.

#### **Advanced QoS features**

To integrate voice, data and video service on one traffic based on a variety of means including IP or MAC address, TCP or UDP port number, etc. to ensure that voice and video are always clear, smooth and jitters free. In conjunction with the Voice VLAN the switch supporting, the voice applications will operate with much smoother performance.

Datasheet

#### Reliable protection

Support STP / RSTP / MSTP Spanning Tree Protocol to eliminate layer 2 loops and implement link backup. Support port aggregation to effectively increase link bandwidth, achieve load balancing, link backup and enhance link reliability.

#### **Enterprise Level Management Features**

Easy to use and manage. It supports various user-friendly standard management features, such as intuitive web-based Graphical User Interface (GUI), industry-standard Command Line Interface (CLI), SNMP (v1/v2c/v3), and RMON. This allows the switch to provide valuable status information and send reports on abnormal events.

# **Specifications**
